

WEBINAR

COVID-19 Expert Panel: You've Got Clinical Questions, Let's See if We Have Answers

MAY 23, 2020

2 HOUR DURATION

[VIEW THE WEBINAR RECORDING](#)

(You'll be prompted to enter your name and email and then the recording will start)

About the Webinar:

COVID-19 has changed many things in our day-to-day lives, including how we interact with patients. Different practice settings face unique challenges in meeting the needs of this patient population and the COVID-19 disease process itself continues to evolve. Physical therapists and physical therapist assistants must continue to change as well. Join our group of content experts for a Q&A session to discuss solutions and lessons learned during this pandemic.

Objectives for this webinar:

- Participants will be able to describe skin challenges and interventions unique to the patient with COVID-19.
- Participants will discuss issues around staffing and PPE usage.
- Participants will describe clinical challenges raised by COVID-19 in clinical practice, including ways practicing clinicians have addressed these various challenges.
- Participants will describe aspects of physical reconditioning of the COVID patient, including problems and strategies.

Presented by:

Brian Hull, PT, DPT, MBA

Director of Rehabilitation
